

Forklift Fork Positioner

Fork Positioner for Forklift - A fork positioner is actually a tool constructed out of top quality materials meant to be able to withstand the most difficult operations and work environments. This particular piece of equipment could enable drivers to maneuver the blades hydraulically without leaving the seat. Side shifting units have the extra ability to be able to laterally position the arms or the entire load in order to facilitate much more exact carrying and position in a quicker and much more effective way.

The only one of its kind fork pocket design enables operators to be able to securely swing the unit's forks without any fear of damaging the positioning cylinders. This could allow the worker the alternative to either perform independent or simultaneous fork movement, dependent upon the job requirement. For most forklifts with non-OEM carriages, complete carriages are considered necessary. Standard OEM carriages could be converted into blade positioners on available units.
