

Barrel Clamp

Barrel Clamp - A Barrel Clamp is really a hydraulic or mechanical accessory designed for a lift truck. It could be used so as to clutch the object you would like to transfer with the forklift and is often used for handling barrels, kegs and paper rolls. A few types of barrel clamp accessories also have a revolving function. For example, the rotate function allows the one operating the forklift to be able to slot in a vertically stored paper inside the horizontal intake of a printing press.
